

North Shore Community School
2024-2025

Lead-in-Water Annual Notification

North Shore Community School is committed to providing a safe working and learning environment for employees and students. The School maintains a lead-in-water management plan that was developed to reduce the potential for exposure to lead in water and to comply with Minnesota State Statute 121A.335.

Minnesota State Statute 121A.335 requires public school buildings serving pre-kindergarten and kindergarten through grade 12 to establish a plan to accurately and efficiently test for lead in potable water sources every five years. In addition to testing, the School has also implemented water management practices as well.

Our water testing is completed by a third-party vendor, utilizing an accredited laboratory and was last completed in 2024, therefore, testing is required again in 2029.
